

Procella P6 reference loudspeaker

Reference quality audio - Compact design - Cost effective

The Procella P6 is a high quality loudspeaker with the same high dynamic range capabilities and pure audio quality as its bigger brother, the P8. It is presented in an elegant, slim-profile cabinet suitable for use with plasma/LCD screens or with projection screens.

The P6 and the P8 have 'Identical Voices™' and can be used together in a surround system. The main difference with the P8 is that the P6 is dedicated to on-wall or in-wall installation and cannot play as loud, yet still has all the power needed for THX-level performance in a small to medium-sized room.

The P6 specs a very high quality high frequency compression driver on a compact wave guide, unique to the P6. Bass and mid are produced by a top-of-the-range 6.5" woofer. A custom made crossover network rounds off this impressive package.

The Procella P6 will be available in horizontal (h) and in vertical (v) cabinet configurations to allow the client to choose the most suitable fit for their purposes. Please note that the two cabinets deliver exactly the same audio quality and can be used interchangeably. (The 'h' is not restricted to use only as a center speaker!)

The P6 can be used with any high quality amplifier or AV receiver. Recommended subwoofer: Procella P10.

Procella P10 dual subwoofer

Compact - Powerful - Dual 10" Woofers

The Procella P10 had to be something special. After the success of the P15 and the P18 subwoofers, we knew we couldn't just make a smaller subwoofer, it had to be the best small subwoofer ever made.

With two opposing 10" woofers and a top-of-the range 200W+200W ICEpower™ amplifier and Texas Instruments 96/24 DSP, the P10 punches way above its compact size and weight. With the pure audio quality and transient bass response you have come to expect from Procella Audio subwoofers, the P10 combines ideally with the P6 and P8 loudspeakers.

For undistorted bass quality in a compact cabinet and at a affordable price, the P10 will be the perfect foundation for your Procella Audio loudspeaker system.

Intended usage of the P6 and the P10:

- Compact on-wall HiFi stereo system
- Compact reference quality surround sound systems (5 x P6, 1 x P10)
- Surround speaker in larger surround systems (in combination with the P8 for the screen channels)
- For use in home and professional environments

Our mission

Procella Audio loudspeakers were first designed in 2005 by Anders Uggelberg and Gerben Van Duyl, both directors with DTS in London at the time. Their mission was to find a loudspeaker that could reproduce all the different cinema, home entertainment and music content that DTS is involved with. As no loudspeaker could be found that could do it all, Uggelberg and Van Duyl decided to design their own system.

Once the system was successfully installed into the DTS Theatre at the DTS European head offices, Uggelberg and Van Duyl decided to take their speaker design to market, founding Procella Audio Ltd. Today, their mission is still to create the best speaker systems possible for all modern entertainment content.

The Procella P8 loudspeaker

The Procella P8 differs from other loudspeakers in that it is designed to deliver HiFi sound quality at both high as well as low sound pressure levels and its enclosure is designed to take best advantage of either wall-mount, free-standing or in-baffle wall installation. For the low end, these objectives have been achieved by utilizing a professional, high power 8" driver in a closed cabinet. The high frequency range is handled by a high quality, compression driver mounted onto a wave guide. Unlike commonly used dome-tweeters, this combination gives a controlled dispersion of the high frequencies and distortion-free reproduction of those frequencies, even at very high sound pressure levels.

The Procella P15 and P18 subwoofers

The Procella P15 subwoofer is intended for small and medium size rooms, both for music and movie play-out. The P15 packs and amazing punch thanks to its Italian made, high power 15" driver, yet takes up a modest 36cm by 55cm footprint and stands just 65cm tall.

For the Procella P18 subwoofer, we shoe-horned not one but two 18" (46cm) woofers into a closed cabinet, no deeper or taller than a P15 but twice as wide. Retaining the audio quality that Procella Audio is famous for, the P18 just delivers a lot more, up to 137dB (1m) of pure, transient bass.

Powered by B&O ICEpower™ amplifiers with built-in Texas Instruments 96/24 DSP units, which deliver 600 Watt to the P15 and 1100W to the P18, our subwoofers have lots of 'headroom', allowing them to drive any size room without ever sacrificing audio quality.

The Procella P815 3-way Active

Our flagship model, the Procella P815 brings untold realism to music and movie recordings. Pure, non-fatiguing, highly revealing, natural reproduction of instruments, human voices and all other sounds is now within your reach with this precision loudspeaker system.

A combined Procella P8 and P15, the Procella P815 has an amazing 2,000 Watts of high efficient, high performance D-class power on board, courtesy of an ICEpower™ amplifier, combined with a built-in TI 96/24 DSP.
